Diagnosis and Management of Appropriate Patients with Peyronie’s Disease: Presentation and Interactive Simulation Experience

Hilton Quebec, Beaumont-Belair
Quebec City, QC
Sunday, June 30, 2019
17:00 – 19:00
FACULTY

Dr. Richard Casey
Dr. Casey is Chief of Urology at Halton Healthcare Services, a role he has held since 2005.

He obtained his FR(C)S after completing the Gallie Surgery Program at University of Toronto. As an AUA scholar, he completed a postdoctoral program in Endocrinology at the University of Texas.

He has a large practice focused on sexual medicine and manages Canada’s only niche Urology CRO. His interest in Peyronie’s has perplexed his family but enriched his patients.

Dr. Serge Carrier
Dr. Carrier is a Professor in the Department of Surgery, Division of Urology at McGill University, and is a urologist at McGill University Health Centre.

He obtained his medical degree from Laval University (Quebec), where he also completed his urology residency. Dr. Carrier then completed his training as a postdoctoral fellow in andrology, sexual medicine and neurourology at the University of California, San Francisco.

His major academic focus and areas of research include: men’s health, reproduction and hypogonadism, sexual and bladder dysfunction, prostate health and BPH. He has published over 100 papers.
Diagnosis and Management of Appropriate Patients with Peyronie’s Disease: Presentation and Interactive Simulation Experience

This educational session is designed to provide urologists with a hands-on experience using collagenase clostridium histolyticum (CCH) for appropriate patients with Peyronie’s disease. This will be an opportunity to experience injecting on a simulator in order to understand the art of injecting CCH.

After this sessions, participants will be able to:

- Understand limitations with previous Peyronie’s disease treatments
- Acquire hands-on experience using the newest treatment for Peyronie’s disease
- Obtain a better understanding of Peyronie’s disease through shared patient cases
